☐ Approve for Cross-listing (attach Graduate Permission to Cross-list Form)

Date (Semester/Year) the course will first be offered, course changes or deletion will go into effect: Fall 2014 pending program approval.

NEW COURSE:

*ATTACH THE SYLLABUS FOR A NEW GRADUATE COURSE to include:

- Course description and objectives
- Method of teaching (e.g., lecture, seminar, on-line, hybrid)
- Required and optional texts and materials
- Graduate School Grading Scale
- Assignments, student learning outcomes and assessment components
- Policies to include attendance, Honor Code, American Disabilities Act statement
- Tentative course schedule with specific topics
List prerequisites and / or other restrictions below

Students enrolled in the program will be full time students, and the students will matriculate through the program in cohorts over the 2 years*1. Typically, all students will take the same course together each semester, including one summer course offered during the regular summer session(s). The courses normally will be offered in the daytime. Students will intern during the spring semester of their second year. Charleston students and the CL Council Report (2010).

*1 In the event of an approved leave of absence, the student will join a new program cohort

Will this course be added to the Degree Requirements?

a) X□ Yes □ No

b) If yes, explain

The curriculum is modeled to meet the content requirements of the National Child Life Council. Program curriculum entails a combination of theory and application to optimize effective program development and initiation with children and their families. Specifically, students will learn to effectively educate children about their illnesses, minimize stress and anxiety for children and families facing medical illness, prepare children for painful and/or invasive medical procedures, advocate for children and families within the multi-faceted health care delivery system, create opportunities for facilitation of developmentally focused self-efficacy, self-esteem, and autonomy, provide non-pharmacological interventions to comfort children and improve adherence to medical treatment, and provide developmentally normalized life experiences within health care settings to promote optimal growth and development.

Upon completion of the program, graduates will have satisfied all course requirements and completed the mandated practicum and formal internship in CL settings (supervised and directed by certified CL specialists) necessary to take the certification examination given by the CL Council (CLC). As the culmination of the program, students will complete a semester-long internship in child life (i.e. required for certification in child life), through the MUSC Children’s Hospital or other hospitals in SC and throughout the U.S.

B. Credit Hours  

3

Is this course repeatable? [ ] yes  [X] no  If so, how many credit hours may the student earn in this course?

III. CATALOG DESCRIPTION  

Limit to 50 words EXACTLY as you want it to appear in the catalog: include prerequisites, co-requisites, and other restrictions. If changing course description, please include both old and new course descriptions.

A comprehensive overview of pediatric chronic illnesses and their impact on the child and family. Coverage will emphasize the multidimensional, interdisciplinary nature of children and families interacting with the healthcare system using a developmental framework. Coverage includes pediatric illnesses, treatment, and the effects of medical intervention on children and families.

IV. RATIONALE / JUSTIFICATION: If course change – please indicate the course change details. If course change or deletion—please provide reasons for change(s) to or deletion of a course. If a new course—briefly address the goals/objectives for the course and the relationship to the strategic plan.

This course as a core course in the master of science in child life program will help students gain an understanding pediatric illness, issues in treatment of these illnesses, and the impact of these illnesses and the health care system on children and families. In addition, students will learn about the developmental impact of pediatric illnesses, both chronic and acute, on the cognitive, behavior, and social functioning of children. Illness will be presented in terms of a risk-resiliency model, and students will come to understand empirical data regarding incidence, prevalence, effective interventions, and outcomes. The role of the child life specialist in the interdisciplinary care team will be emphasized.

This course as a core course in the proposed MSCL program will build on a superior undergraduate curriculum in psychology, education, sociology, and health and human performance. The development of this master degree program meets the needs of the community by training the next generation of professionals to work in family-centered care facilities. MUSC Children’s Hospital is one of the leading children’s hospitals in the country, and their goal of patient and family centered care includes a desire to “create partnerships among health care practitioners, patients, and families that will lead to the best outcomes and enhance the quality and safety of health care”.

In keeping with the strategic plan of the College of Charleston, The MSCL program will complement a number of undergraduate programs at College of Charleston including health, developmental, and clinical psychology, elementary/early childhood education, communication and sociology, as students will take related courses in these existing undergraduate programs to prepare for entry into the MSCL program. This proposed course and the program in overall do not overlap with existing programming at the College of Charleston or Medical University of South Carolina (MUSC). The interdisciplinary nature of the proposed degree highlights the cooperation between the various College of Charleston departments and the two institutions.

</table>

As articulated in the course syllabus the course aligns with the following student learning objectives for the program.

1. Knowledge Base of Child Life and Pediatric Psychology- Students will demonstrate familiarity with the major concepts, theoretical perspectives, empirical findings, and historical trends in child life and pediatric psychology.

2. Critical Thinking Skills in Child Life -. Students will respect and use critical and creative thinking, skeptical
inquiry, and, when possible, the scientific approach to solve problems related to child development, family systems, pediatric illness, and the broad healthcare system.

3. Application of Child Life Interventions - Students will understand and apply psychological, educational, and developmental principles to personal, social, and organizational issues.

4. Values in Child Life - Students will be able to weigh evidence, tolerate ambiguity, act ethically, and reflect other values that are the underpinnings of child life as a discipline.

5. Personal Development - Students will develop insight into their own and others’ behavior and mental processes and apply effective strategies for self-management and self-improvement.

The overall curriculum of the program and the courses within the program were designed to support three major programmatic goals for the MSCL program.

1. To provide a nationally preeminent graduate program that provides students with comprehensive academic and experiential training that prepares them for gainful employment as child life specialists in diverse pediatric and community settings.

2. To provide students with the knowledge, skills, and professional abilities that enhance and enrich the lives of children and families facing medical illness.

3. To design programmatic content and delivery of content that center on effective learning, which is durable and transferrable to a broad array of pediatric, general medical, and community settings.

VII. IMPACT ON EXISTING PROGRAMS and COURSES: Please briefly document the impact and expected changes of this new/changed/deleted course on other departments, programs and courses; if deleting a course—list all departments and programs that include the course; if adding/changing a course—explain any overlap with existing courses in the same or different departments; if adding or deleting a course that will be part of a joint program identify the partner institution.

The MSCL program will complement a number of undergraduate programs at College of Charleston including health, developmental, and clinical psychology, elementary/early childhood education, communication and sociology, as students will take related courses in these existing undergraduate programs to prepare for entry into the MSCL program. This proposed master degree program does not overlap with existing programming at the College of Charleston or Medical University of South Carolina (MUSC). The interdisciplinary nature of the proposed degree highlights the cooperation between the various College of Charleston departments and the two institutions. Therefore, the program will not overburden any one department, program, or institution. A select number of existing graduate courses currently offered at College of Charleston will be integrated as coursework in the MSCL program and will include specialized readings and assignments specific to child life theory and applications.
VIII. COSTS ASSOCIATED WITH THE ACTION REQUESTED: List all of the new costs or cost savings, (including new faculty/staff requests, library or equipment, etc.) associated with the action requested. New courses requiring additional resources will need special justification.

Please see attached budget.
